Executive Summary

The MetroMart blueprint describes an enterprise-class e-commerce ecosystem. The full blueprint should not be treated as a USD 20,000 one-shot build. Our recommendation is to launch a premium customer-facing MVP first, then use real product data, user behavior, payment behavior, and operational feedback to expand the platform in controlled stages.

The MVP prioritizes the public shopping experience from day one. The frontend is designed to remain the visual foundation of the future platform. Later phases focus mainly on backend depth, automation, integrations, reporting, and operational intelligence.

The strategic path is simple: **Launch a premium storefront first. Stabilize on real data. Then expand the backend into a full enterprise commerce platform.**

Strategic Approach

We are separating the platform roadmap into safer, commercially realistic layers:

- 1. Premium MVP Relaunch:** A commercially usable online store focused on customer-facing storefront modules, clean catalog administration, cart/checkout, and standard payment integrations.
- 2. Critical Commerce Pack:** Enhanced product discovery, conversion utilities, lead capturing, and commerce analytics designed to improve conversion and marketing tracking.
- 3. Stabilization & Enhancement Sprint:** Post-launch improvement sprint based on real operational feedback and transaction details.
- 4. Release 2 — Enterprise Backend & Platform Expansion:** Expands and deepens the MVP backend foundation into an enterprise-grade platform layer, covering advanced 1C sync, warehouse ledger tracking, automated refunds, and advanced order flows.
- 5. Ongoing Support Retainer:** Post-launch operational support for system bug checks, payment callback monitoring, and small improvements.

Commercial Snapshot

The following commercial model provides a low-entry MVP budget with clear, module-based upgrade paths:

Work Item / Package Description	Cost (USD)
Premium MVP Relaunch (Committed storefront go-live)	USD 20,000
Recommended Critical Commerce Pack (SEO, Merchandising, Analytics)	+USD 12,000
Optional Stabilization & Enhancement Sprint (6–8 weeks post-launch)	+USD 9,000
AI Catalog & Commerce Intelligence Pilot Option	+USD 7,500
Release 2 Complete Path Bundle (Includes Critical, Stabilization, AI Pilot & Enterprise expansion)	+USD 80,000
MVP + Release 2 Complete Path Total (Full Platform Path)	USD 100,000
Ongoing Support Retainer (Post-Launch, Up to 40 hours/mo)	USD 2,500 / month

Exchange Rate Note: All commercial figures are stated in USD. GEL equivalent, if required, may be calculated at the exchange rate applicable at invoice generation.

Scope by Stage

Premium MVP Relaunch — USD 20,000

The MVP is not a temporary demo. It is a commercially usable first version of the online store focusing on a premium shopping experience and a clean, extendable backend foundation. It includes:

- **Premium Front-End:** Responsive mobile-first storefront, Homepage, Category, Brands, PLP, and PDP layouts.
- **Search & Filter:** Core search logic and basic category, brand, price, and attributes selection.
- **Checkout & Ordering:** Shopping cart, linear checkout form, and automated customer email confirmations.
- **Administration:** Laravel/Filament custom admin dashboard, basic order management logs, and basic SEO fields.
- **Catalog Tools:** Category, brand, and basic attribute tables, product images, and Excel/CSV catalog imports.
- **Payments:** Bank of Georgia and TBC standard payment/installment callbacks (subject to bank sandbox access).
- **Setup & Launch:** GA4/GTM analytics, Meta Pixel tags, Cloudflare setup, production deployment, and 30-day bug warranty.

Critical Commerce Pack — +USD 12,000

We recommend this pack for a commercially stronger storefront launch. It improves conversions, search indexing, customer retention, and analytics tracking. (Quoted separately at USD 15,000 if contracted post-launch).

1. Search & SEO Visibility Pack

- Purpose: helps users find products faster and improves search engine indexing rankings.
- Includes: Enhanced search autocomplete, priority filters, SEO metadata templates, structured JSON-LD data, sitemaps, and category SEO blocks.

2. Conversion & Merchandising Pack

- Purpose: turns storefront visitors into buyers using merchandising triggers.
- Includes: Promotional product badges, related products widgets, alternative recommendations, featured product blocks, and comparison tools.

3. Retention & Lead Capture Pack

- Purpose: captures undecided leads and brings past visitors back to the store.
- Includes: Customer wishlist/saved cart, 'notify-me-when-available' stock alerts, lead request forms, and email notification template designs.

4. Commerce Analytics Pack

- Purpose: provides management visibility on sales funnels and funnel drop-off points.
- Includes: GA4 e-commerce events, GTM event triggers, search query logging, checkout step drop-off analytics, and basic monthly report templates.

Optional Stabilization & Enhancement Sprint — +USD 9,000

Duration: 6–8 weeks post-launch

This is not general support. It is a planned optimization pass based on real transaction data, users behavior, and admin workflow feedback after the store goes live. It includes:

- Real-data issue resolutions and catalog imports corrections.
- Refining attribute filters and index settings based on user queries.
- Addressing payment callback edge-cases and checkout UI bugs.
- Admin panel user workflow refinements and performance/caching optimizations.
- SEO indexing and canonical redirects adjustments.

Release 2 — Enterprise Backend & Platform Expansion

Base Value: +USD 55,000 **Complete Path Bundle:** +USD 80,000

Release 2 expands and deepens the MVP backend foundation into an enterprise-grade platform layer. The premium storefront frontend remains the visual anchor, while Release 2 expands backend automation: CRM syncing, warehouse stock tracking, RMA returns pipelines, and full ERP/1C synchronization.

Prerequisites: Release 2 requires the Critical Commerce Pack, Stabilization Sprint, and AI Pilot. These are automatically included in the Complete Path Bundle (+USD 80,000, bringing the full total to USD 100,000).

AI Catalog & Commerce Intelligence Pilot

Cost: USD 7,500 (with MVP/Full Path) **Cost Later:** USD 12,000

A practical, narrowly scoped AI pilot (not a chatbot) to automate catalog tasks: AI product description writers, SEO metadata generation, image alt text suggestions, and basic admin review approvals before publish.

Note: A full customer-facing AI assistant is excluded and requires a separate statement of work.

Post-Launch Operational Support

Cost: USD 2,500 / month **Included Hours:** Up to 40 hours/month

Term: Recommended initial term: 6 months. Renewable after review.

Start: From MVP launch. Retainer is payable monthly in advance regardless of actual usage. Unused hours do not roll over.

Included:

- Storefront production monitoring and server technical supervision.
- Bug fixes on delivered storefront and admin features.
- Payment callback callback webhook investigation.
- Basic 1C sync monitoring and log analysis.
- Security, backup checks, and monthly technical status reports.

Not Included:

- Major new features or redesign tasks.
- New payment gateways, ERP connectors, or marketplace integrations.
- Bulk product data entry or catalog writing.
- Work requests exceeding the monthly 40-hour limit.

Indicative Timelines

Work Item	Duration	Timing / Sequencing
Premium MVP Relaunch	10–14 weeks	Starts upon contract kickoff
Critical Commerce Pack	4–6 weeks	Runs parallel to MVP or post-MVP
Stabilization Sprint	6–8 weeks	Initiated 6–8 weeks post-launch
Release 2 Expansion	4–6 months	Scheduled after MVP stabilization

Recommended Technology Stack

Frontend is optimized for fast loading, SEO-friendly rendering, and strong Core Web Vitals where infrastructure and content quality allow. Preliminary recommendations:

Component	Proposed Technology
Frontend Storefront	Next.js (React)
Backend API / Catalog	Laravel (PHP)
Database Store	PostgreSQL or MySQL (infrastructure dependent)
Administrative Panel	Laravel Filament admin panel
Catalog Search	Database search (Upgrade to Meilisearch/Typesense if catalog requires)
Cache & Queues	Redis (if queued sync is needed)
Edge Security / DNS	Cloudflare CDN
Analytics tracking	GA4 / GTM / Meta Pixel

Milestone Payment Structure (Premium MVP)

Milestone Stage	Percentage	Amount (USD)
Milestone 1: Contract Signing & Kickoff	50%	USD 10,000
Milestone 2: Design & Spec approval	25%	USD 5,000
Milestone 3: Staging delivery	20%	USD 4,000
Milestone 4: Storefront Launch	5%	USD 1,000
Total MVP Launch Contract Value	100%	USD 20,000

Dependencies & Risk Management

Key Dependencies: Timely bank API sandboxes and gateway key approval, stable data feed samples, category/brand spreadsheets, client-side ERP technical contacts, domain name access, and prompt stakeholder approvals.

Exclusions: Cloud hosting fees, paid Cloudflare subscriptions, SMS/email gateway packs, bank commission fees, client-side 1C code modifications, content entries, copywriting, and bulk product catalog cleaning.

Risk Management Language: A small subset of integration tasks carries higher uncertainty due to external documentation, provider-side approvals, and client-side system dependencies. These are confirmed during Discovery and handled against agreed caps.

Change Request Policy: Each phase begins with an approved scope. Any requirement additions or design modifications requested after scope freezing are estimated as separate Change Requests, which the client can approve, defer, or decline.

Recommended Next Step

Begin with Phase 1 — Discovery & Architecture (USD 8,000 value, included in MVP)

To start your project, we launch the 2-3 week Discovery phase. This investment defines the exact MVP scope, confirms technical dependencies, maps ERP/1C fields, locks Bank gateway setup, and produces the final SOW before engineering kickoff.

To initiate kickoff, contact us at hello@theasylum.agency.
